1 A Use the Gauss-Jordan technique to solve the system. $3 x_1 - 0.1 x_2 - 0.2 x_3 = 7.85$

$$3 x_1 - 0.1 x_2 - 0.2 x_3 = 7.85$$

$$0.1 x_1 + 7 x_2 - 0.3 x_3 = -19.3$$

$$0.3 x_1 - 0.2 x_2 + 10x_3 = 71.4$$

В

i. Drive the formula of false position method with proper figure.

ii. Differentiate between Gauss-Jordan and Gauss elimination method.

$$y_2 = x_u + \frac{f(x_u)(x_u - x_u)}{f(x_u) - f(x_u)}$$

Answer any 05 out of 06 Questions (Split answers are highly discouraged)

Marks: 70

7

7

- A A total of 8,600 taka was invested in two accounts. One account earned 4 3/4 % annual 7 interest and the other earned 6 1/2 % annual interest. If the total interest for one year was 431.25 taka, how much was invested in each account? Use Gauss-elimination Method to calculate the investment in each account.
 - B The cost of 4 kg onion, 3 kg wheat and 2 kg rice is 60 taka. The cost of 2 kg onion, 4 kg 7 wheat and 6 kg rice is 90 taka. The cost of 6 kg onion 2 kg wheat, and 3 kg rice is 70 taka. Find the cost of each item per kg by Cramer's rule.
- 2 A Apply Cholesky decomposition to the symmetric matrix.

[A] = 6 15 **5**5 15 55 225 55 225 979

- Use the Newton-Raphson method to estimate the root of $f(x) = e^{-x}$, employing an initial guess of $x_0 = 0$. Iterate until ε_1 less than 10^{-8} %.
- Implement the point-slope strategy to numerically integrate $dy/dx = -2X^3 + 12X^2 20X + 8.5$ from X=0 to X=3.0 with a step size 0.5. The initial condition at X=0 is Y=1.
- 3 B Use the secant method to estimate the root of $f(x) = e^{-x} x$. Start with initial estimates of X_{-1} 7 =0 and $X_0 = 1.0$. The true root is 0.56714329. Iterate until $\varepsilon_t = 0.0048\%$.
- A Use bisection method to solve the following problem up to approximate percent relative $\tau_0 < 0.422$.

 $f(c) = \frac{667.38}{c} \left(1 - e^{-0.146843c} \right) - 40$

- Demonstrate the concepts of convergence and divergence through an appropriate example using the iteration method.
- 5 A

 Derive the formula of false position method with proper figure.
 - ii. Differentiate between Gauss-Jordan and Gauss elimination method.
- Fit a second order polynomial to the data of the following table. Also find out standard error S_{v/x}

Xi	y _i
1	7.7
2	13.6
3	27.2

- A Show a case where bisection is preferable to false position with a suitable example.
- 6 B Given dy/dx= $\frac{1}{2}$ (x+y), y(0)=2, y(0.5)=2.636, y(1.0)=3.595, y(1.5)=4.968. Find y(2) by Milne's method.

	The second secon
Answer any 02 out of 03 Questions	
1 Resolve the following system using the Cramer's Rule.	7.5
$0.14 X_1 - 0.1 X_2 - 0.2 X_3 = 7.85$	
$0.10X_1 + 7X_2 - 0.3X_3 = -19.3$	
$0.30X_1 - 0.2X_2 + 10X_3 = 71.4$	
2 Use the Gauss-Elimination technique to resolve the following system.	7.5

Answer any 05 out of 06 Questions (Split answers are highly discouraged)

[A.] Resolve the following system using the Cramer Rule.

 $0.40X_{1}$ - $0.1X_{2}$ - $0.2X_{3}$ = 7.85 $0.10X_1 + 7X_2 - 0.3X_3 = -19.3$

 $0.30X_1 - 0.2X_2 + 10X_3 = 71.4$

se the Gauss-Elimination technique to resolve the following system.

 $0.3X_1-0.1X_2-0.2X_3 = 7.85$ $0.10X_1 + 7X_2 - 0.3X_1 = -19.3$ $X_1-0.2X_2+10X_3=71.4$

[A.] Apply the Choleski's process to locate the root of the following system

 $X_1 \cdot X_2 \cdot X_3 = 2$ $2X_1+3X_2+5X_1=-3$

 $3X_1 + 2X_2 - 3X_1 = 6$

(B.)

How can we eliminate the error in the Trapezoidal rule by applying the Simpson's rule?

Integrate using Simpson's 3/8 rule. $f(x)=0.2+25x-200x^2+675x^3-900x^4+400$, from a=0 to b=0.3

[A.] Solve the following system using the Gauss-Jordan method.

 $0.7X_{1}-0.1X_{2}-0.2X_{3}=7.85$

 $0.10X_1 + 7X_2 - 0.3X_3 = -19.3$ $X_1 = 0.2X_2 + 10X_3 = 71.4$

IB.

Show two scenarios in the case of an iteration process, which are convergence and divergence.

Write down the algorithm of Eisection Method.

[A3] How to fit a accond-order polynomial on the data of the following table. Also find out standard error 3, from this table data.

U=> M== Sala = 1 10-12/1)

X	M	SY
0	2.1	D
1000	7.7	6
1 2	13.6	0

[B.] What is like ar regression? Derive an equation for linear regression. How to estimate the parar. as and as through linear regression?

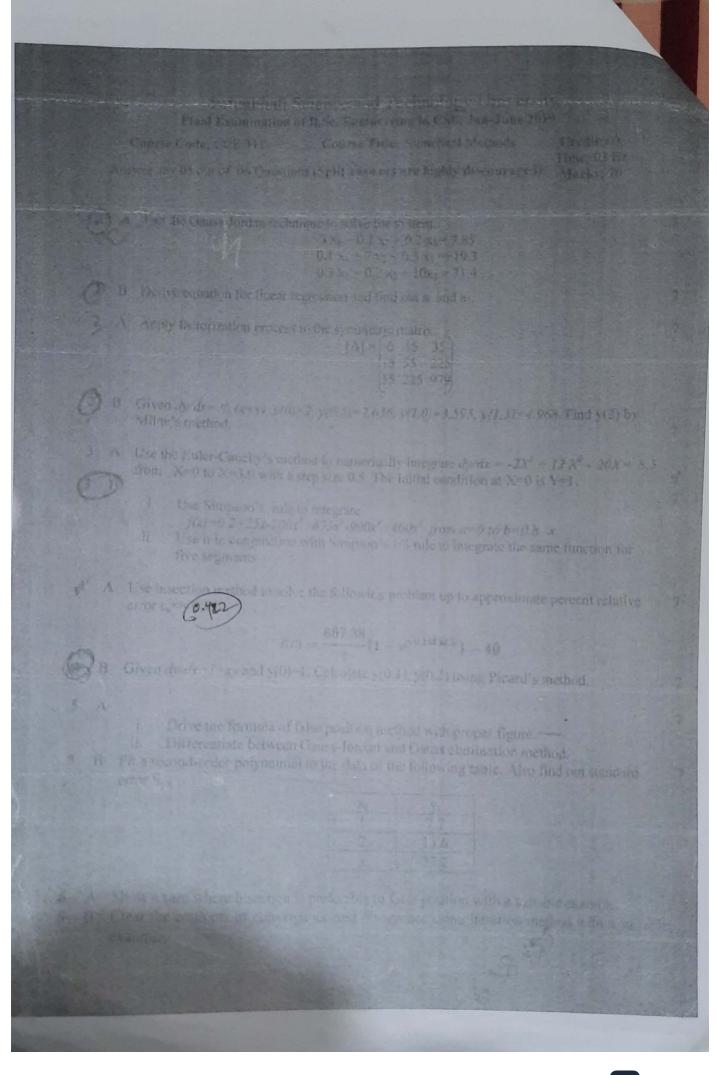

State Woddle's Rufe 115

Show that $x_t = x_{t-1}(x_t)(x_t \cdot x_t)/(f(x_t) - f(x_t))$ in case of false position method.

Given dy/dx= $\frac{1}{2}$ (x+y), y(0)=2, y(0.5)=2.636, y(1.0)=3.595, y(1.5)=4.968. Find y(2) by Milne's

[A.] Given dy/dx=1+xy and y(0)=1. Calculate y(0.1), y(0.2) using Picard's method.

Use the Euler's method to name: ically subgrate dylds = $-2X^{3} + 12X^{2} - 20X + 8.5$ from X=0 to X-4.0 with a step size 0.5. The initial condition of X=0 is Y-1.

- 3. 2
- Derive the Gauss climination method for a system of n linear equations and hence write the difference between Gauss method and Gauss-Jordan method.
- Solve the following system

$$5x - 2y + z = 4$$

$$7x + y - 5z = 8$$

$$3x + 7y + 4z = 10$$

- by (i) Gauss elimination method and (ii) Gauss-Jordan method.
- 4. Derive the Bisection Method and False position method.

- 8
- b) Find a real root of the equation $(x^1 + x^2 1) = 0$ by using False position Method.
- .

6

5. a) Derive the Trapezoidal rule and simpson's 1/3 rule.

- 7. 7
- Evaluate $\int_{0}^{1} \frac{dx}{1+x^2}$ by using Trapezoidal rule and Simpson's 1/3.
- 6. a) Describe the Runge Kutta 2nd order method for the solution of first order ordinary differential equation.
 - Solve $\frac{dy}{dx} = x + y$, y(0) = 1 and find y(0.2) by Runge Kutta 4th order method.
