

Internet of Things (IoT)

IoT Ecosystem

Different components of IoT

IoT Ecosystem

It encompasses all the components needed to collect, process, and analyze data from IoT devices, enabling smart applications and services.

✓ IoT Core

- Sensors & Actuators, microcontrollers, internet connectivity, service platform including security

✓ Cloud

- Accepts, accumulates, maintains, stores, and process data

✓ IoT Gateway

- It ensure bidirectional communication between IoT networks and other networks

✓ Analytics

- It indulges in conversion and **analysis of data** which results in recommendations and future decision making

✓ User Interface / Visualization

- Design sleek, visually appealing, interactive, and ease-of-use graphical user interface (GUI)

✓ IoT Architectures

- **Graphical structure** of the designed IoT-based solutions and products
 - 3-layer architecture, IoT-WF, oneM2M, etc.

IoT Ecosystem

It encompasses all the components needed to collect, process, and analyze data from IoT devices, enabling smart applications and services.

✓ IoT Frameworks

- Tools needed to design and implement IoT-based solutions and products
 - Microsoft Azure IoT,
 - Cisco Ultra IoT,
 - Amazon AWS IoT,
 - IBM Watson IoT,
 - etc.

IoT Network Architecture

- Network and its application should never be built without careful planning
- Architecture is how you design (i.e. **graphical structure**) your solution.

Very common 4-Layer Architecture for IoT

- IoT architecture refers to the framework that defines **how** different components of an IoT system **interact** to enable data collection, **transmission**, **processing**, and ultimately the **delivery of services**.

Core Components of IoT

- **Sensors** - to gather data and events
- **Actuators** – responsible for moving and controlling a mechanism or system
- **Microcontrollers** - automatically controls sensors and actuators; makes them smart
- **Internet connectivity** – responsible for sharing information and control command
- **Service Platform** – ability to deploy and manage the IoT devices and applications including data management, data analytics and security

“Things” in IoT – Sensors

MQ135 - Air Quality Gas Sensor

Sound Detection Sensor

DHT11 - Temperature and Humidity Sensor

PIR Motion Detector Sensor

Pulse Sensor

LDR Light Sensor

Ultrasonic Distance Sensor

IR Sensor

“Things” in IoT – Actuators

4 Channel 5V Relay

Servo Motor

DC Motor

Solenoid valve

Linear Actuators

LED

LCD Display

Access Technologies in IoT

Communication Criteria

- Range
- Frequency Bands
- Power Consumption
- Topology
- Constrained Devices
- Constrained-Node Networks

IoT Access Technologies

Use of Internet Infrastructure

Key Advantages of IP

- Open and standard-based
- Versatile
- Ubiquitous
- Scalable
- Manageable
- Highly secure
- Stable and resilient

- IPv6 packets require a minimum MTU/PDU size of **1280 bytes**.
- The maximum size of a MAC layer frame in IEEE 802.15.4 is **127 bytes**.
 - It gives just **102 bytes for an IPv6 packet !!**

Need of packet/frame size optimization due to

- Constrained Nodes
- Constrained Networks

Modification in Stack

IoT Protocol Stack with
6LoWPAN Adaptation Layer

IEEE 802.15.4e -2011
Amendment

In 6TiSCH IoT Network

- **WPAN**: Wireless Personal Area Networks
- **IEEE 802.15.4**: Low-Rate WPAN
- **6LoWPAN**: IPv6 over Low-Power WPAN
- **TSCH**: Time Synchronized Channel Hopping
- **6TiSCH**: IPv6 over the TSCH mode of IEEE 802.15.4e
- **6top**: 6TiSCH Operation Sublayer

Application Layer

IoT Gateway

- It is a **physical device or software program** that serves as the connection point between the two different types of networks

Gateway

- Provides bidirectional **communication**
 - Between IoT protocols and other networks
 - e.g. Zigbee <--> Ethernet
- Sometimes programmed to execute some **processing** operations
 - Edge computing
- It is necessary to maintain **security** to a certain extent
 - Can shield the entire IoT systems from any cyberattack

Source: B. Kang, D. Kim, H. Choo, "Internet of Everything: A Large-Scale Autonomic IoT Gateway", IEEE Transactions on Multi-scale Computing Systems, vol. 3, no. 3, 2017, pp. 206-214.

Use of Cloud

- IoT generates vast amount of Big Data; this in turn puts a huge strain on Internet Infrastructure.
- Cloud can facilitate to
 - Provide different services
 - Store huge amount of data
 - Process the data efficiently
- Benefits of Cloud Platform in IoT
 - Network Scalability
 - Data Mobility
 - Time to market
 - Security
 - Cost-effectiveness

- AI focuses on putting human intelligence in machine
- It gives the ability to a machine/program to think and learn by itself

Use of AI in IoT:

- **Smart Home**

- Automated HVAC control

- **Industrial IoT**

- Predictive maintenance
- Optimized supply chain

- **Farming**

- Smart farming
- Interruption warning

- **Self-driving Car**

- Mimic human driving on road

- **Health**

- Auto-diagnosing any disease
- Assistive healthcare

Data Analytics in IoT

- ❖ The **business value of IoT** is not just in the ability to **connect devices**, but it comes from **understanding the data** these devices create.

“Data Analytics + IoT => Smart Business Solutions”

- **IoT analytics** is the **application of data analysis tools and procedures** to realize value from the huge volumes of data generated by connected IoT devices

Challenges:

- ✓ Huge **Volume**
- ✓ Real-time data **flow**
- ✓ **Variety** of data types
 - e.g. XML, video, SMS
- ✓ Unstructured data
- ✓ **Variable** data model and meaning / **value**

Securing IoT

- Both the IoT **manufacturers** and their **customers** didn't care about the security !

Unauthorized access to IoT devices

DDoS attack halts heating in Finland amidst winter;
November 7, 2016

User Interface

- Information made available to the end-users
- Users can actively check and act in for their IOT system

Important Characteristics:

- ✓ Sleek design
- ✓ Visually appealing
- ✓ Interactive UI
- ✓ Ease-of-use
- ✓ Handy

IoT Framework

- Framework provides a development environment.
 - It provides appropriate infrastructure to design and implement the architecture
- IoT framework comprises of large number of components
 - sensors, sensor systems, gateways, mobile app, embedded controller, data management platform, analytical platform, and so on.
 - support **interoperability** among all devices, provides **secure connectivity**, **reliability** in data transfer, **interface** to 3rd party application to built on it, and so on.

Few IoT Framework	Few IoT Framework
RTI (Real-Time Innovations) Connex DD	Cisco Ultra IoT
Salesforce IoT cloud	Microsoft Azure IoT
Eclipse IoT	PTC ThingWorx
GE (General Electronic) Predix	Amazon AWS IoT
IBM Watson IoT	Kaa

Lessons Learned

- What is IoT Ecosystem
- Different components of IoT
 - IoT Architecture
 - IoT Core
 - ✓ Sensors & Actuators
 - ✓ IoT Access Technologies
 - ✓ Use of Internet
 - IoT Gateway
 - Use of Cloud in IoT
 - AI for IoT
 - Data Analytics in IoT
 - Security in IoT
 - User Interface for IoT
 - IoT Framework

Thanks!
